PROJECT TITLE

Feasibility Study and IT Governance Framework for a German Car Manufacturer Expanding into Egypt

PROJECT OVERVIEW

Students will act as consultants to evaluate whether a German international car manufacturer should establish a factory in Egypt. The study must cover **market, financial, supply chain, legal/regulatory, labor, and operational factors**. Additionally, students must design a **complete IT governance framework** for the Egyptian management office, ensuring compatibility with:

1. Mother company policies.
2. International laws and regulations (e.g., GDPR).
3. Local Egyptian laws and regulations.
4. ISO 27001 certification extension to Egypt's data center.

PART I: BUSINESS FEASIBILITY STUDY

Market Analysis

- Automotive demand trends in Egypt.
- Competitor landscape (local and international).
- Export potential via Egypt's trade agreements.

Financial Analysis

- Capital investment requirements (land, construction, machinery).
- Operating costs (labor, utilities, raw materials).
- Revenue projections and ROI.
- Break-even analysis (5–10 years).

Supply Chain & Logistics

- Availability of raw materials and parts.
- Transportation infrastructure (ports, roads, rail).
- Local supplier ecosystem.

Laws & Regulations

- Egyptian investment laws.
- Taxation and incentives for foreign investors.
- Environmental and safety regulations.
- Trade agreements and customs policies.

Labor & Human Resources

- Workforce availability and skill levels.
- Labor laws and union considerations.
- Training and development needs.

Economic and Operations

- Political and economic stability.
- Currency fluctuations.
- Operational risks (supply chain disruptions, compliance gaps).

PART II: IT GOVERNANCE FRAMEWORK

Governance Structure

- Alignment with mother company IT governance policies.
- Clear roles and responsibilities (RACI model).
- Reporting lines and accountability.

Compliance & Legal Requirements

- GDPR compliance for data handling.
- Egyptian data privacy and cybersecurity laws.
- SDAIA/PDPL alignment for Middle East operations.

ISO 27001 Extension

- Scope definition for Egypt data center.
- Risk assessment and treatment plan.
- Control implementation and monitoring.
- Evidence collection for audits.

Policies & Procedures

- Information security policies.
- Incident response and crisis management.
- Data classification and retention policies.
- Vendor and third-party management.

Technical Controls

- Access control and identity management.
- Encryption and secure communication.
- Network monitoring and intrusion detection.
- Backup and disaster recovery.

Audit & Monitoring

- Internal audit schedules.
- External audit readiness.
- Continuous compliance monitoring.

DELIVERABLES

1. **Feasibility Report:** Comprehensive analysis of Egypt's suitability for factory setup.
2. **IT Governance Framework Document:** Policies, procedures, RACI matrix, compliance mapping.
3. **ISO 27001 Extension Plan:** Steps to extend certification scope to Egypt.
4. **Presentation Deck:** Executive summary for management.

EVALUATION CRITERIA

- Depth of analysis across all feasibility dimensions.
- Practicality and alignment of IT governance framework.
- Integration of international and local compliance requirements.
- Professional quality of reports and presentations.

ADDITIONAL SECTIONS (TO ENSURE COMPLETENESS)

- Environmental Impact Assessment.
- Corporate Social Responsibility (CSR) Strategy in Egypt.
- Digital Transformation Roadmap for IT Department.
- Change Management Plan for Transition.

INSTRUCTIONS FOR STUDENTS

- Work in teams simulating consultancy groups.
- Divide tasks into feasibility study and IT governance framework.
- Use real-world references (laws, ISO standards, market data).
- Prepare both written reports and oral presentations.

EXPECTED LEARNING OUTCOMES

- Apply GRC theoretical knowledge to a practical case.
- Develop audit-ready governance documents.
- Bridge international standards with local regulations.
- Gain experience in feasibility and compliance consulting.
